. This study addresses remittance behavior in Germany in the new institutional framework. According to the existing theoretical **models** on remittances, household size and years in the hosting country affect remittances negatively in **models** based on altruism and positively in the case of those focusing on investment motives; other variables as for example income are considered to have the same sign (Rapoport/Docquier 2005). However, we have to bear in mind that economic **models** on altruism only consider income-conditional forms of this behavior; pure altruism would occur, if remittances are independent
