Jon completion of this module students will be able to analyse historical and current problems of European economics. In order to achieve this goal they will learn to apply different economic theories to a wide range of issues. Students will recopise the farming that different theories made by any theory discussed. The course enables students to see economic suses from different theories to while the module focus on Longon. It is understood that Europea's economic formation is understood that the students of the control of the students of the control o	Compulsory elective module		Credit points Weekly seme		ester hours		classroom	selfstudy	Period			Stage of study	
goal they will learn to apply different economic theories to a wide range of issues. Students will reposite the familing that a samption made by any theory discussed. The course enables students to see economic issues from different theories as well as the above one economic sustains and will be able to evaluate their studielity. They will be able to judge the internal coherence as well as the assumption made by any theory discussed. The course enables students to see economic issues from different theoretical angles, including non-exclusive ones. While the module focuses on Europe, it is understood that Europe's economic connections are global in scope and hence discussions of non-furopean regions may come into play. Students will be able to detail the main pillurs of economic theories and relate them to other theories. They will be able to interpret economic data and control of the subject			5	2	SWS	150 h	30 h	120 h	1 semester	Every autum	nn semester	3rd semester	
and successfully incorporate these into existing theories, explaining what they expected to see empirically based on theory and whether their expectations were satisfied. Students will be able to recognise which theory fits with different types of empirical data. Students will be able to apply different theories to different contexts, developing the theoretical framework and using it to form conclusions. They should then be able to interpret the feedback from the data in terms of the theoretical assumptions. Students assess statements of theoretical or empirical content and are able to form some judgment about the validity of the respective statement. They should be able to critique such statements and point out the key issues that determine their validity.
