	5	2 SWS	150 h	30 h	120 h	1 Semester	jedes Wintersemester	5. Semester

**Course aim**

The students develop qualitative and quantitative research methods in sports science as well as scientific working techniques. Selected sports science research methods - from document analysis, experiment and field research to interview procedures, case analysis and questionnaire investigation - are also used in a project (e.g. in the fields "Sport in school life", "Situations and incidents in physical education", "Inclusion and heterogeneity in school sport", "Sport and media", "Sport and health", "Learning at another place", "Fan cultures", "Youth work", "Learning to move in formal and informal contexts", "Application of sports psychology", "Movement behaviour within and outside school sport"). The principles of scientific work are applied in practice (e.g. replicating or modifying an empirical experiment or conducting and evaluating interviews) in addition to teaching and developing.

Students will be able to develop, implement and evaluate a project in the field of sport.

The students acquire the competence to apply qualitative and quantitative research methods of sports science appropriately and to independently conduct their own empirical or hermeneutical studies.

Independent, self-directed scientific work during studies, ability to work successfully and effectively in groups; research-based learning.
